SECURE CLOUD CONNECT

SECURELY ACCELERATE CLOUD, NETWORK & APPLICATION PERFORMANCE FOR THE ENTERPRISE

Connect to Any Public Cloud with Secure Cloud Connect

Neovera provides secure high-speed, high-capacity direct connections to any public cloud provider. With Neovera's Secure Cloud Connect solution, enterprises can easily create hybrid environments between their internal locations and public cloud environments to ensure optimal performance across global network environments.

High-Capacity, High-Speed, Highly-Secure Packages

Neovera's Secure Cloud Connect 1Gb and 10Gb pre-configured packages include **security, routing, switching and load balancing** in every IBX datacenter where Express Route and Direct Connect is available. We've bundled **co-location, power, cross connects and servers** into one simple offering, and deliver it with 24x7 continuous support provided by Neovera's Joint Security Operations Center (JSOC) located in the LEED & SSAE16 SOC-1 Type II Equinix Data Center in Ashburn, VA.

YOUR LOCATION

Why Neovera?

High Performance. Total Security. Full Visibility. Neovera is a leading cyber security services provider with a successful track record of securing and managing complicated enterprise application workloads. Our goal is to help clients understand the security threats associated with their environment, identify risks, and implement the necessary measures to prevent security breaches and data loss.

We not only help you accelerate cloud, network and application performance – we protect your enterprise from cyber attacks. We ensure your high-capacity, high-speed direct connections are highly secure and protected from malware, ransomware, and other cyber attacks by providing 24x7x365 vigilance over your organization's security activity. Our security information and event management (SIEM) system aggregates and correlates data from security feeds such as network discovery, vulnerability assessment and intrusion detection systems, creating a "single pane of glass" for our security experts to monitor and protect your enterprise. Critical information systems are replicated in real-time, ensuring uninterrupted service delivery uptime under all circumstances, while emerging threats and advanced attack methods are identified and thwarted before damage is done.

How will your enterprise benefit?

Enterprises looking for a secure, end-to-end fully managed solution can take advantage of the numerous benefits Neovera offers without deployment hurdles or incurring a CAPEX burden on their budget. When you're ready to start, we'll take care of everything - from assessment, implementation and management - for you.

Neovera Secure Cloud Connect Advantages:

MOVE TO THE (HYBRID) CLOUD
Secure Cloud Connect makes it easier than ever to deploy a private cloud and to securely and directly connect to public clouds. In other words, it lays the foundation for a hybrid cloud. And that's where enterprise is heading.

UNMATCHED CYBER SECURITY EXPERTISE
When exchanging massive amounts of data, you and your end users are counting on the security of that connection. With Neovera, you get the cyber security expertise that your enterprise needs to protect it's critical information.

GET A MORE EFFICIENT NETWORK
Secure Cloud Connect simplifies your network, giving you access to the cloud and the internet without forcing trac through only select locations. In fact, with direct-connects, you can bypass the public internet entirely when accessing Amazon Web Services (AWS) and/or Microsoft Azure.

IMPROVE YOUR QUALITY OF EXPERIENCE
Secure Cloud Connect delivers higher throughput and lower latency in a number of ways, including leveraging globally distributed IBX data centers so that your apps deploy closer to your end users.

TAKE ADVANTAGE OF PROVIDER CHOICE
With connectivity to 1,400+ networks, 2,500+ cloud providers and IT service providers, you can work with the providers you prefer and negotiate contracts that save you money.

INCREASE MANAGEABILITY
With a flatter network, you gain the agility, security and visibility you need to take control of your business.

At-A-Glance Results

Neovera's Secure Cloud Connect has the power to significantly boost performance. Applications hosted within a public cloud infrastructure[1] featuring direct connectivity saw dramatic improvements:

- **50%** faster in http-load tests for Web-based applications

- **40+%** faster file transfers for Microsoft SharePoint©

- **40+%** faster launch times on Virtual Desktop Infrastructure

- **20%** reduced jitter and latency for video-streaming applications

- **30%** improvement in page-load tests for web-based applications

- **100x** faster data transfers for data replication applications such as Oracle© Data Guard

[1] Baseline (without Equinix IBX) – P2P – Branch-to-HQ connectivity over WAN circuits within/across metros (US – East to West)

Where are Secure Cloud Connect packages available?
Neovera's Secure Cloud Connect packages are available globally at the following Equinix IBX data centers:

Americas	Atlanta	AT1, AT2, AT3
	Chicago	CH1, CH2, CH3, CH4
	Dallas	DA1, DA2, DA3, DA4, DA6
	Los Angeles	LA1, LA2, LA3, LA4
	New York	NY1, NY2, NY4, NY5, NY6, NY7, NY8, NY9
	Sao Paolo	SP2
	Seattle	SE2, SE3
	Silicon Valley	SV1, SV2, SV3, SV4, SV5
	Toronto	TR1
	Washington DC	DC1, DC2, DC3, DC4, DC5, DC6, DC11
EMEA	Amsterdam	AM3
	Frankfurt	FR4, FR5
	London	LD4, LD5
	Paris	PA2, PA3, PA4
	Zurich	ZH1, ZH2, ZH4, ZH5
Asia-Pacific	Hong Kong	HK1, HK2, HK3
	Melbourne	ME1
	Osaka	OS1
	Singapore	SG1, SG2
	Sydney	SY1, SY2, SY3
	Tokyo	TY1, TY2, TY3, TY4

Get started today!

Neovera's Secure Cloud Connect empowers your enterprise network with unparalleled performance while enabling it to meet the ever-increasing bandwidth demands. As a result, we provide globally consistent network security and quality of experience to your users—all while potentially lowering your Total Cost of Ownership (TCO).

- **EASE.** Simplifies your Wide Area Network (WAN)

- **ACCESS.** Brings a node of your enterprise network into an Equinix International Business Exhange™ (IBX®) data center that's closest to your users

- **PERFORMANCE.** Allows your enterprise to directly connect to network and cloud providers

- **SECURITY.** Housed in LEED & SSAE16 SOC-1 Type II Equinix Data Center and monitored 24/7 by Neovera's JSOC experts.

Contact Neovera today to start optimizing application performance and enjoying the benefits of super fast, super secure connectivity!
